Safety Vacuum Release System (SVRS)

Model SR-500

The Model SR-500 is a Safety Vacuum Release System (SVRS) which works by monitoring the vacuum on the influent side of the pool or spa pump. When a blockage occurs in the main drain or skimmers, a sudden rise in vacuum will cause the SR-500 to shut down the pump operations and activate an audible alarm. The pump will remain off with the alarm sounding until manually reset.

~ Features and Benefits ~

- Works on all size pumps
- All components are high voltage rated—provides improved reliability and longer life
- Back-lit LCD—more easily read display
- Multiple audible alarm capabilities—allows for quicker alerts to harmful situations
- Vacuum monitored 128 times per second—rapid response and accurate readings
